About PAROLE (WORDS) App

PAROLE is a matching App that allows you to associate various IMAGES with corresponding NAMES. And above all, **you can CUSTOMIZE THE GAME** for any single student need.

- Depending on the student's level, **you can play with 1-2-3-4-6-8-10 images**.

- For each image **you have 2 kinds of instruction**: you can match each image with a **NAME** (as LION) or with a **QUESTION** (as LIVES IN THE SAVANAH)

- The app includes **more than 150 images divided into 10 categories** (clothing, school items, kitchen items, bathroom items, food, musical instruments, games, furniture, vehicles, animals).
  All the categories and images are visible by default, but **you can CUSTOMIZE the game** by making invisible any category or name that you don't need.
  For example,
  You need to focus on ANIMALS category: in this case, you can keep visible only Animals category and keep visible only the pictures of those animals which your student is about to learn, or animals he has already learnt and he must practice.

- But there's more!
  Each category can be EXPANDED and CUSTOMIZED according to your needs by simply TAKING new photos or selecting them from your personal GALLERY, pairing NAMES and QUESTIONS and RECORDING your VOICE.

- Furthermore, **you can ADD brand NEW IMAGE CATEGORIES** based on anything you need to teach, such as the student's favorite games, his preferred food, school subjects, world flags, classmates' names, sports and much more, depending on his specific needs.

- In the game, **you can also create up to 3 different TOKENS and CUSTOMIZE them**.
  The Token can have 1 or 2 rewards: intermediate and final.
  When the student gets the reward, he can see on the screen a picture of its favorite toy or he can be directly linked to his favorite online game or YouTube video.
